

PMS Pro

Production Management System

Full Visibility. Full Accountability. Full Speed.

Cloud-based, mobile-first platform built exclusively for garment manufacturers — from requirement to final settlement.

Version 1.0 / April 2026

The Problem We Solve

Garment manufacturing today is fragmented, manual, and invisible

Paper Registers

Requirements written down, easily lost or forgotten

WhatsApp Chaos

Tracking via messages — unstructured, unsearchable

Stale Excel Sheets

Manual updates, errors, no real-time visibility

Wrong Piece Counts

Quantities manually tallied — disputes are common

Missed Deadlines

No system to flag delays until it's too late

Zero Accountability

No record of who did what, or when they did it

Result: Lost jobs · Delivery delays · Disputes over piece counts · No bottleneck visibility

What is PMS Pro?

A Cloud-Based, Mobile-First Production Platform

The Platform

PMS Pro digitizes and automates the entire garment production lifecycle — from the initial requirement to fabric cutting, karigar dispatch, goods collection, and final settlement.

Every team member works from a single digital system. Managers get real-time visibility into every job's current status, who is responsible, and whether it is on time or delayed.

"PMS Pro tells you exactly where every job is, who has it, and whether it's on time — at any moment, from any device."

 **Production Team** — Fill forms, view jobs

 **Admin** — Full analytics, corrections, settings

Technology Stack

Progressive Web App (PWA)

Database: Supabase (PostgreSQL Cloud)

Real-Time Sync: WebSocket Live Sync

The 6-Step Production Pipeline

Every order follows a defined pipeline — automatically tracked, automatically flagged when delayed.

  **Conditional Step:** Step 3 (Inhouse Cutting) is conditional — if the thekedar handles cutting directly, the job automatically skips Step 3 and jumps from Step 2 ➡ Step 4.

Core Modules & Features

Live Dashboard

Real-time job list with search, date & step filters. Daily dispatch log. Live status charts.

Production Forms

Color-coded tabs for each step. Smart job routing. Confirmation popup prevents errors.

Cutting Reports

Pending jobs, completed log, and Hisab (bill calculator) with PDF download.

Pipeline View

Stage-grouped overview with late-job alerts. Per-karigar workload (Thekedar Insights).

Admin Analytics

10-section dashboard: KPI bar, trends, funnel, delay analysis, heatmap, bottleneck table.

Master Data Mgmt

Admin manages all dropdowns and the 3-level item catalog. No developer needed.

Smart Delay Detection Engine

Built-in Time Intelligence

Delay Thresholds Per Step

Every job has a defined maximum time per step, calculated using working hours only:

- **Working Days:** Monday – Saturday
- **Working Hours:** 10:00 AM – 7:00 PM (9 hrs/day)
- **Sundays:** Completely excluded

Step	Name	Max Time	Days
Step 2	Pending Approval	27 hrs	≈3 days
Step 3	Pending Cutting	18 hrs	≈2 days
Step 4	Pending Naame	18 hrs	≈2 days
Step 5	Pending Jama	126 hrs	≈14 days
Step 6	Pending Settle	27 hrs	≈3 days

On Track

Within allowed time

Late

Exceeded time limit

Complete

Fully settled

 These indicators are visible on every job card, in the pipeline view, and across the admin analytics dashboard.

Admin Analytics Dashboard

Executive KPI Bar

12

Total Jobs
Active orders in pipeline

8

Active Jobs
Currently in production

150

Completed This Month
Monthly production volume

85%

Approval Rate
Jobs approved vs rejected

240

Pieces in Production
Total items being manufactured

2.5

Avg. Delay (Days)
Average delay across all jobs

Analytics Modules

-  **Production Volume Trend**
12-week area chart: new vs. completed jobs per week
-  **Live Pipeline Funnel**
Horizontal bar showing jobs pending at each step
-  **Delay Analysis by Step**
Avg & max delay per step — identify bottlenecks
-  **Thekedar Performance**
Ranked karigar list by pieces, jobs & avg lead time
-  **Cutting Person Stats**
Donut + stacked weekly bar per cutting person
-  **Activity Heatmap**
18-week GitHub-style calendar of production intensity
-  **Bottleneck Jobs Table**
Sortable table of delayed jobs with severity color-coding
-  **Approval & Rejection Flow**
Approved/rejected/inhouse routing breakdown

Who Is PMS Pro For?

Small to Mid-Size Garment Manufacturers

Companies producing garments in-house or through a network of karigars, with order volumes ranging from tens to thousands of jobs per month.

Team Roles That Benefit

-  Business Owner — Views KPIs, analytics & bottlenecks
-  Production Manager — Monitors pipeline, checks late jobs
-  Sales / Planning — Raises new requirements (Step 1)
-  Cutting Person — Logs cutting entries (Step 3)
-  Dispatch Manager — Logs naame to karigar (Step 4)
-  Store / Jama Person — Logs goods received back (Step 5)
-  Accounts / Admin — Handles settlements (Step 6)

PMS Pro Replaces:

Paper Registers

» PMS Pro creates a digital record of every step

WhatsApp Tracking

» Structured, searchable records — instantly accessible

Excel Sheets

» Live, real-time system — no manual updates ever

Disconnected Tools

» One integrated platform for every team member

Key Business Benefits

1

Zero Lost Jobs

Every requirement is digitally recorded from Day 1. Nothing falls through the cracks.

2

Instant Visibility

Check status of any job from your phone — without calling anyone.

3

Full Accountability

Every step records who performed it and when. No more 'I didn't know it was my turn.'

4

Proactive Delay Alerts

Flags jobs before they become a crisis — intervene early, not after the deadline.

5

04 Accurate Piece Counts

Multi-size tracking from cutting through jama. Discrepancies instantly visible.

6

Karigar Performance

Know exactly who handles how much and who meets lead times — make data-driven decisions.

Cutting Hisab Made Simple

Enter rates once, download a professional PDF bill — no manual calculation.

No Hardware Required

Any smartphone with a browser works. No dedicated terminals or expensive hardware.

Data Always Backed Up

Cloud database — safe from lost laptops, corrupted files, or failed hard drives.

Scales With You

10 active jobs or 1,000 — enterprise-grade cloud infrastructure handles it equally.

Integration & Security

Google Sheets Integration

1

Pull from Sheets » Database

Reads all rows from a connected Google Sheet and upserts into Supabase. Ideal for migrating historical data or allowing non-app users to update via Sheets.

2

Push from Database » Sheets

Exports all job records from the database into Google Sheets. Perfect for sharing with parties who prefer spreadsheets, or creating a backup copy.

Both operations available with one button click from the Dashboard.

Access Control & Security

Two-Tier Access Model

General (No Login): View all jobs, fill step forms, view pipeline & cutting reports

Admin (Password): Everything above + analytics, raw data, CSV export, data corrections

Security Details

Admin login via Supabase Auth (email/password)

Session persisted across browser sessions

Admin-only routes protected — unauthorized access redirects to login

All data stored in cloud-hosted PostgreSQL with industry-standard security
